

# Opéra Energie boosts client reporting with Datapred

Benoît Wintergerst - COO

Opéra Energie is the leading energy broker for professional and enterprise clients in France, with a reputation for client focus and innovation.

While recent energy market conditions have increased the need for quality energy buying advice, they have also created **new challenges for energy brokers**:

- Finding effective buying and hedging strategies requires more quantitative analysis.
- Clients demand frequent market updates and situation reports.

Tackling these challenges with spreadsheets would create a massive bottleneck for Opéra Energie's consultants, who frequently take over 30 client call per day.

*« With Datapred's situation reports and market analyses, our clients can visualize what our consultants do for them, and the rationale behind these decisions. »* Benoît Wintergerst

Following a successful trial period, Opéra Energie has decided to **use Datapred's real-time analyses, forecasts and simulations to enhance the market awareness of its consultants.**

Opéra Energie will also **leverage Datapred's reporting capabilities to share personalized situation reports with its own clients**, thus answering their need for continuous updates.
